

SULAKSHAN JOSHI

Kathmandu, Nepal | sulakshanjoshi1@gmail.com | +977 9845990731 | sulakshanjoshi.com.np | linkedin.com/in/sulakshan-joshi

PROFESSIONAL SUMMARY

Cyber Security and Digital Forensics undergraduate with hands-on experience in penetration testing, vulnerability assessment, and digital forensic investigation, complemented by a growing interest in applying AI and data-driven tools to real-world security and development challenges. Proficient in Python, Kali Linux, Metasploit, Nmap, and Autopsy, with practical exposure to AI-assisted research tools (Perplexity AI, NotebookLM, DeepSeek). Holds ISO/IEC 27001:2022 Lead Auditor and EC-Council certifications in Digital Forensics and Ethical Hacking. Motivated to contribute to UNDP's Digital & AI Innovation work with a security-conscious, technically grounded perspective.

EDUCATION

BSc (Hons) Cyber Security and Digital Forensics

The British College, Kathmandu — affiliated with University of the West of England (UWE), Bristol | Jan 2024 – Sept 2027 (Ongoing)

CERTIFICATIONS

- ISO/IEC 27001:2022 Lead Auditor — Mastermind Assurance | Certificate ID: niwsm8y0qs
- EC-Council Digital Forensics Essentials (DFE) — Certificate No. 340885
- EC-Council Ethical Hacking Essentials (EHE) — Certificate No. 313210
- Ethical Hacking: Post-Exploitation, Udemy — Certificate UC-c160bdda-2107-4fee-ad21-9d5d4fcd7931

TECHNICAL SKILLS

Programming & AI Tools: Python, C++, AI-assisted research tools (Perplexity AI, NotebookLM, DeepSeek, Gamma)

Offensive Security / Pentesting: VAPT, exploitation, post-exploitation, MITRE ATT&CK mapping, Metasploit Framework

Reconnaissance & Networking: Nmap (scanning, service/OS detection, scripting engine), TCP/IP fundamentals

Digital Forensics: Autopsy, EnCase, FTK Imager, disk image analysis, chain-of-custody documentation

Operating Systems & Tools: Kali Linux, Windows, Linux CLI, Wireshark, VirtualBox, VeraCrypt

RELEVANT PROJECT EXPERIENCE

Two-Stage Exploitation Chain & VAPT Reporting — Academic Project

Secure Computer Networks Module, The British College

- Conducted a penetration test against a Metasploitable 2 target using a chained Samba exploitation path (symlink traversal and usermap_script remote code execution) via the Metasploit Framework.
- Mapped identified vulnerabilities and attack techniques to the MITRE ATT&CK framework for structured, standards-aligned reporting.
- Authored a formal VAPT report and delivered a technical presentation summarizing findings, methodology, and remediation guidance.

Digital Forensic Investigation of a Disk Image — Academic Project

Security and Forensic Tools Module, The British College

- Investigated a forensic disk image using Autopsy as the primary tool, with EnCase and FTK Imager for cross-verification, maintaining evidence integrity and hash verification throughout.
- Recovered and analyzed carved files, browser artifacts, and email communications to reconstruct a timeline of activity, applying keyword searching and metadata (EXIF/GPS) analysis.
- Produced a detailed forensic report with contemporaneous notes and embedded evidentiary screenshots.

Network Reconnaissance with Nmap — Academic Presentation

Security and Forensic Tools Module, The British College

- Delivered a technical presentation and live demonstration on Nmap scanning techniques, covering host discovery, service/version detection, OS fingerprinting, and scripting engine usage on Kali Linux.

ADDITIONAL INFORMATION

- Genuinely interested in the practical application of AI to security, data handling, and organizational processes; actively building skills in this area alongside core cybersecurity coursework.
- Comfortable working on-site in lab-based environments, setting up security tools and testing environments.
- Strong written and verbal English communication; experienced in technical documentation and presentations.
